

Postdoctoral position

The Shamir lab at Tel Aviv University is inviting applications for postdoctoral positions in development of algorithms for deep sequencing data.

We seek a highly creative, independent, strongly motivated researcher to join our Computational Genomics group at the School of Computer Science (acgt.cs.tau.ac.il). The lab works on high throughput genomics, medical informatics, gene regulation, and cancer analysis using methodologies. The postdoc will collaborate with group members on developing resource-efficient algorithms for analysis of deep sequencing data, using combinatorial algorithms, graph theory and probability. Strong background in theoretical computer science and ability and willingness to program are required. Additional background in bioinformatics or biology is preferred but not essential. Starting date: asap.

Please send your CV and have three reference letters sent directly to: gilit@post.tau.ac.il
